PERSONAL PROJECTS:

Social media app
Free learning

Description
- The application will allow users to register, log in, and interact with various types of entities. The main features include creating and managing posts, where users can add, edit, and delete their own posts. Additionally, users will be able to add friends by sending friend requests and accepting them.

Web Application for Inventory Management
free learning

Description
- This web application is developed using the Django backend framework and React frontend framework. It allows the admin to add products, manage inventory, and create invoices. The React frontend provides a user-friendly interface for seamless navigation and interaction with the inventory management system.

Backend for Bike Allocation Application
Free learning

Description
- The application will allow users to register, log in, and interact with different entities. The main functionality includes bike allocation. Additionally, the application will feature a dashboard for admin to view relevant information and statistics.
